ACADEMIC PROFILE

Third-year Informatics Engineering student at UMSS with demonstrated experience building and deploying critical production systems for public institutions. ICPC competitor with strong foundations in algorithms, data structures and competitive programming. Self-driven and passionate about Artificial Intelligence, software architecture and real-world impact systems.

EDUCATION

- 2024 – Present

B.Sc. in Informatics Engineering
Universidad Mayor de San Simón (UMSS) — Cochabamba, Bolivia
Currently in 3rd year. Core coursework: algorithms & data structures, discrete mathematics, operating systems, software engineering, database systems and computer networks.
- 2024

Competitive Programming Course
Universidad Mayor de San Simón — Cochabamba, Bolivia
Intensive training in advanced algorithmic problem solving, combinatorics, graph theory and optimization. Preparation for ICPC-level competitions.

ACADEMIC ACHIEVEMENTS & DISTINCTIONS

ICPC — International Collegiate Programming Contest
Rank #18 · Departmental Level · Cochabamba, Bolivia
Participated in the most prestigious university-level programming competition worldwide. Demonstrated mastery of advanced algorithms, data structures and complex problem solving under strict time constraints, competing as part of a team. Primary language: C++.

INTERNSHIPS & PROFESSIONAL EXPERIENCE

- Jan – Apr 2026

Full-Stack Developer Intern — ColcaTrufis (MoViRuta)
Autonomous Municipal Government of Colcapirhua · Cochabamba, Bolivia
Laravel 10 · Flutter · MySQL · PHP 8.1 · REST API · GeoJSON · GPS/Location Services
 - Developed full-stack digital transportation platform in collaboration with municipal government authorities, deployed in production at *moviruta.colcapirhua.gob.bo*
 - Built cross-platform mobile app with integrated mapping capabilities using Flutter/Dart, GeoJSON, and Nominatim geocoding
 - Designed RESTful API architecture handling geospatial data, real-time location services, and GPS tracking systems
 - Implemented interactive route visualization and administrative panels for transportation unions and government officials
 - Impact: Modernized public transit infrastructure, improving citizen access to transportation information and streamlining municipal transit management
- Jan – Apr 2026

Full-Stack Developer & Systems Architect — Electoral Runoff Platform
Municipal Election Platform (22 March 2026) (concurrent)
React (Vite) · Node.js · Express · PostgreSQL · JWT · REST APIs
 - Co-developed and deployed production web platform for real-time ballot monitoring and vote-control operations during municipal mayoral election
 - Implemented secure role-based access control (administrators, delegates, supervisors), polling-station assignment workflows, and electoral record (acta) transcription/validation
 - Built frontend modules for live results tracking, voting progress monitoring, geographic/precinct management, and historical acta auditing
 - Developed backend APIs ensuring data integrity, traceability, and operational reliability under election-day production usage
 - Successfully supported live operation with end users, contributing to transparent and timely reporting during the voting process

ACADEMIC & RESEARCH PROJECTS

2024 – 2025 Custom Data Structures Library & Project Management System — Java
Self-directed Academic Project

Java · OOP · Algorithms · Graph Theory · Data Structures

- Implemented binary trees, doubly linked lists, custom sets & maps, and graphs from scratch
- Applied graphs to model task dependencies and workflows in a project management system
- Strong focus on OOP: abstraction, encapsulation, modularity and code reuse beyond curriculum

2024 – 2025 NLP Command Library & Martial Arts Web Platform — PHP / Laravel
Academic & Personal Project

PHP · Laravel · Regex · SQLite · SQL Server · Voice/Video Integration

- Built a PHP library using regex for natural language pattern detection triggering actions from voice and video commands
- Integrated the library into a Laravel platform for martial arts management with SQL Server & SQLite backends

2025 – Present Webcam-Based Motion Capture System for 3D Animation
Independent Research Project

Python · MediaPipe · OpenCV · NumPy · Blender · Linear Algebra

- Markerless motion capture using webcam and MediaPipe Pose landmark detection
- Applied quaternion mathematics and 3D coordinate transforms for per-bone rotations in Blender
- Exported structured JSON animation data (30 FPS, 9 bones) — no specialized hardware required

2024 – Present Game Development — Godot 4, 3D Modelling & Pixel Art
Independent Creative & Technical Project

Godot 4 · GDScript · Blender · Pixel Art

- Developed RPG-style games from scratch in Godot 4 including logic, mechanics, state systems and UI
- Integrated 3D modelling (Blender) and pixel art into end-to-end interactive experiences

TECHNICAL SKILLS

LANGUAGES

JavaScript

Python

C++

Java

PHP

Haskell

C

Dart

HTML5/CSS3

FRAMEWORKS & TOOLS

React

Node.js

Laravel

Flutter

TailwindCSS

MediaPipe

Pandas

NumPy

PowerBI

PLATFORMS & DATABASES

PostgreSQL

MySQL

SQLite

SQL Server

MongoDB

Git/GitHub

Linux

n8n

LaTeX

Jira

RESEARCH INTERESTS

- Artificial Intelligence & Large Language Models
 - Neural Networks & Deep Learning
 - Natural Language Processing (NLP)
 - Machine Learning & Computer Vision
- AI Agents & Intelligent Automation
 - Full-Stack Software Architecture
 - Competitive Programming & Algorithms
 - Computer Graphics & 3D Simulation

LANGUAGES

Spanish

Native

English

B1/B2 · Intermediate–Upper Intermediate

Strong conversational fluency; able to hold fluid discussions with native speakers.
Good reading & writing proficiency.
